LOOKING TO CREATE A BEAUTIFUL, WARM AND NATURAL INTERIOR DESIGN USING WOODEN FLOORS?

With the Span floors collection of engineered flooring, it would be easy to do. The challenge with engineered floors is their stability, structural durability in the face of fluctuating humidity as well as use of Indoor air safe ingredients. Additionally the wood must come from sustainable forestry. While Engineered wood floors are a whole lot better than Solidwood flooring in terms of expansion and contractions (stability) in general, not all engineered floors are created equal.

At Spanfloors, we scout the world and look for superbly crafted engineered floors produced by top international brands and bring them to India so that you can use them to create some real awesome rooms! Feel free to look at our collection and compare it with the competition on a feature to feature basis. We offer a range of engineered floors at varying price points that not only look good in the short run but tend to stay that way in the long run too because of the pains we have taken to go into details.

Need more proof? Have a look at the showroom display or ask for samples for a touch and feel. Or see the pictures of numerous beautiful homes where we have helped homeowners and designers like you create some seriously good looking floors.

THE 4 KEY PROMISES OF A SPAN FLOOR!

AESTHETICS

We understand that you are looking to create a beautiful space. That is why you would find a wide variety of beautiful engineered floors in our collection. From very light to mid browns to dark to fashionable greys, we are sure you would find something to go with your dream interior design. In addition, we offer a variety of formats such as planks, herringbone or the chic chevrons to go with the coolest design trends!

DURABILITY

Beauty, at our end, is not skin deep. It goes deeper, much deeper. For example, the Spanfloors engineered flooring collection is mainly with top layer thickness of 3 mm and more. This makes the flooring really robust and able to take the day to day knocks rather easily. In addition the locking and installation systems used are very strong too allowing the flooring planks to stay together and look nice in the long run. Now what about the daily traffic in a typical Indian home? Well, we have taken care of that too. The scratch resistant coating on top makes the planks very resistant to abrasion caused by dust under the feet. And what about moisture? Again, the structure of our engineered floors is quiet water resistant. While flooding will destroy any wood floor but short of that you are in good hands. Just ask for and follow the Instructions as given in our product fact guides and maintenance instructions.

HEALTH

Now this may come as a surprise but there is a connection with health too. The raw materials used while manufacturing engineerd flooring contain some amounts of chemicals like other building materials. We take care to source our finished floors only from reliable manufactures who have the necessary certifications in this regard. This means after installation you do not have to worry about any off gassing from the product which is beyond the permissible limits set by the stringent European and US standards. All products come with necessary 3rd party certifications.

SUSTAINABILITY

No one wants to beautify their homes at the cost of the general environment. Right? We know that you care for the planet just as much as we do. So we have taken the necessary care to offer you engineered flooring that is made of wood exclusively from certified forestry operations. Once again you can ask for the necessary 3rd party certifications that our manufacturers adhere to.

CERTIFICATIONS

* Not all certifications apply to all products. For exact information, please ask.

THE SPAN FLOORS STORY

Satinder Chawla director of Span Floors opens heart to reveal the story behind success.

Q. What is Span Floors story (from beginning to today)? How did Span Floors came into existence?

From the beginning, I had a passion for beautiful spaces. When I first came across wood floors in the year 2000. I just fell in love with them and wanted one for my room right away. One thing led to another and being in the industry soon we were selling them! That was the start of our wood flooring business.

Q. What Span Floors as a brand stands for?

Chic Design and World class Quality. These 2 characteristics describe our entire business offering.

Q. Take us through your product and offerings and who are the audience for the same?

Our laminate collection is ideal for design and quality conscious people who want the realism and effect of a real wood floor yet do not want to spend as much. The authenticity has to be seen to be believed.

Besides aesthetics, the technical specs are top notch too! All our products are being manufactured in international world-class manufacturing plants at the highest quality levels. Not only that these manufacturers are certified FSC or PEFC or an equivalent stringent certification and meet strict indoor air-quality norms such as E1, Green guard etc.

Q. What about your new website? We hear it is designed for amazing online customer experience?

Yes, the website is designed to be simple, intuitive and interactive. We specifically took care to present only the most relevant data so as to cut unnecessary clutter. Information is laid out in a simple, easy to navigate manner so that the sought information is gathered and understood quickly.

Q. What tips can you give to those who are interested in buying laminate floors? What few key points one should keep in mind?

People generally go by aesthetics as the first parameter. So if they like something they check the price and so on... No doubt, how the product looks is extremely important as ultimately that is going to affect the visual outcome of the room.

However, the other equally important concern should be the expected in-service lifespan of the product, it's ability to take the day to day usage and the impact the product has on the well being of the room occupants.

Last but not the least, the best of the product can go waste without proper technical advice and installation. Do look for the quality of advice from the vendor. This will be a guide as to how much he understands his own product and his ability to help you in case of any service need in future.

Q. Can you please share your vision for next 3-5 years?

Our vision is clear. We will continue to work relentlessly to retain our leadership in the designer wood flooring segment.

We fully understand that this leadership has been only been possible due to the trust our esteemed End Users, Architects, Designers and Chanel Partners continue to place on us and the ongoing hard work of the entire Span Floors team and our international partners.

KNOW YOUR SPAN FLOOR!

The Span Floors Engineered flooring collection comes with top of the line technical specs for successful day to day and long term usage. At the same time, it will be good to know some key things that will help you make a sound decision as well as get the best out of your investment should you choose to go ahead. Read on below for further information:

SCRATCH RESISTANT

Our engineered floors are finished using high quality lacquers or hardwax oils depending on the collection. Generally, lacquered coatings are more scratch resistant than hardwax oils. At the same time, scratches on hardwax oils are easier to repair. Speak to your Span floors specialist for a recommendation based on your particular needs and lifestyle.

WATER RESISTANT

The high quality structure in all our floors are strong enough to handle the routine moisture fluctuations found in air as well as an occasional accidental drink spill. Just wipe off the spill immediately. At the same time, flooding of the flooring or continued seepage of moisture from any source, may cause damage to a part or the whole of the floor. In such an event, a few or all of the floorings planks may need to be replaced or sanded and recoated depending on the situation.

EASY INSTALLATION

Our floors come pre edged with a T & G profile or a click profile for easy installation. You could even take your floor along when you move and refit depending on the type of installation.

EASY CLEANING

Use a broom or a vacuum cleaner followed by a well wrung mop, if needed, to take care of the routine cleaning. No special equipment needed. The use of our recommended cleaning solutions added to fresh water used for mopping will keep your floors in good shape. Our technical and sales team are well trained to guide you on the appropriate steps.

HYGENIC

The surface of our engineered floors are coated with suitable finishes. That makes them hypoallergenic (hypo = low) for most people. Day to day cleaning using appropriate cleaners which are easily available in stock with us is generally enough to maintain a high level of cleanliness.

RELATIVE HUMIDITY

Relative humidity or RH is the amount of moisture present in the room air at any given time. This keeps fluctuating during the day and seasonally. Any wood based material reacts to these changes. You may have noticed your wooden doors and windows jam a bit during monsoons. This is humidity at work. Similarly, such changes may cause your engineered wood flooring to expand or contract leading to some creaking noises or gaps between plank joints typically associated with wood floors. While proper installation is helpful in avoiding these to a large extent, sometimes the humidity fluctuations are too large. Keeping the in room humidity by using air conditioning helps particularly during monsoons. Similarly when the air is too dry, some humidification helps. Speak to our teams for some easy tips on how to do this.

IMPACT RESISTANCE

Engineered floors are real wood floors. Hence they can be dented somewhat depending on the intensity of the impact. These floors are not fragile though and can mostly take the knocks from day to day life. However high heels particularly not in good repair may cause dents over a period of time. Depending on the thickness of the top layer of your engineered wood floor, it may be possible to renew the entire flooring to a new like condition after many years of usage.

SOUND REDUCTION

World class underlays tremendously affect both in room as well as below room acoustics. Using an appropriate underlay such as Elastilon (a layer of thin matt laid under the flooring) can improve the quality of sound tremendously while walking on it with hard heels.

MORE ON FLOOR CLEANING AND MAINTENANCE

Our special cleaners and cleaning kits enable you to clean and maintain your floors in a sweep. Ergonomic and simple to use, the floor cleaning kit is quick to assemble and refill with the specially developed engineered flooring cleaner. Just use the correct kind based on the finish on your Span engineered floor. Forget filling up a bucket and adding concentrate, just spray and clean!

Additionally you may opt to buy just the Cleaning Concentrate and add the recommended quantity as mentioned on the bottles to the water bucket and use it for day to day mopping with a very well wrung mop.

APPLICATION : Daily care (hardwood flooring)

LONG TERM MAINTENANCE

Being real wood, our engineered floors, may at one time after some years of usage, require a renewer coating or a full sand and recoat to make them look fresh again. Using the specially formulated solutions with appropriate machines can freshen up the wood surface for a more brighter and revitalised finish. Just get in touch with us and our trained specialists will guide you through.

SPAN SILENCE + UNDERLAY – INSTALLATION CUM SOUND INSULATION SYSTEM

One of the most important parameters of comfort is sound. Building materials that provide quality sound insulation are much in demand today. With noise surrounding us in the external environment, it is becoming increasingly important that we use materials that offer a quieter and more comfortable indoor environment to help us concentrate & relax better. The Span Silence + sound reduction cum installation underlay for wood floors provides unmatched sound and walking comfort while at the same time providing an exceptionally firm hold on to the wood flooring planks.

Unlike normal underlays which simply lie below the surface unattached to the flooring, the Span Silence + system forms a permanent bond with the flooring planks yet remains unattached to the subfloor below allowing for a floating installation. For the end user, the result is a combination of fantastic sound insulation as well as an installation system that feels as if one is walking on a fully bonded surface – A very solid feel indeed. We invite you to take a test walk at our stores to perceive the difference!

THE SPAN SILENCE + ADVANTAGE

- Unmatched sound insulation – both in room & the room below
- A scientific installation system that works with wood rather than against it.
- Improved moisture resistance
- Quick & easy to install
- Improved indoor air quality as compared to traditional systems (nail down/glue down)
- More comfortable installation – knee friendly

WE ARE HERE TO HELP

OUR GUARANTEES

Our floors have been developed for a long product life. And because only tested quality leaves the factory, all our products carry a warranty directly by the international manufacturers. You are requested to go through the warranty terms and make yourself aware of the conditions so as to get the best out of your purchase. Detailed warranty can be requested by contacting us at floors@spanfloors.com.

DELIVERY

Your satisfaction is our goal. Therefore, all products are normally available ex stock, and thus as soon as possible at your site.

VISIT US ON WWW.SPANFLOORS.COM TOO

Besides the information available in this brochure, you will find additional information about us and our products at www.spanfloors.com. From the product portfolio through to new product features and technical information, our internet platform provides everything you are looking for.

YOUR LOCAL CONTACT

We have an expanded pan India sales channel. For information on our local retail partner please visit www.spanfloors.com or else write us directly at floors@spanfloors.com.

At Span floors, we understand our responsibility towards environment – both internal as well as external. The manufacturers we represent conform to very high standards with regards to sourcing of wood & the finished products impact on indoor air quality. A big range of products accordingly are certified by either FSC or PEFC for wood sourcing while for emissions certifications such as E1 or M1 are applicable. These certifications are obtained by the manufacturer directly at their end.
